**Five-Year Schedule of Timber Sales (FYSTS)
FY 2008 to FY 2012**

Introduction

The Five-Year Schedule of Timber Sales (FYSTS) lists proposed timber sales on State Forest and State forest classified lands in the Fairbanks and Kantishna Management Areas. The schedule provides a time line that identifies the sales, their estimated volumes and their general locations. At a minimum, the Division of Forestry (DOF) must develop a schedule every two years. The schedule may be written annually if market and stand conditions warrant a more frequent change. It is designed to provide the general public, local governments, other agencies and the timber industry a view of what DOF may be offering on State lands managed by Fairbanks Area Forestry for the next five years based on the State's fiscal year. The Five-Year Schedule provides a basis for public comment and identification of issues although it is not developed as a decision document for particular timber sales. The schedule provides DOF with a guide in considering, designing, allocating state resources and conducting timber sales. Listing a proposed sale does not mean a decision has been made to go forward with the sale but instead solicits input on whether or not to proceed with sale planning, and on particular concerns to be addressed in sale design.

The timber sales included in this schedule are part of a management philosophy that ensures a sustained yield of renewable forest resources and the integrated use of forest lands by a myriad of users, as guided by State statutes and regulations, the Tanana Valley State Forest Management Plan and the Tanana Basin Area Plan. Sales are located across a wide area of the forest land base and vary in size, species composition and development requirements. Emergency salvage sales, market conditions, sale preparation problems, logistical constraints, funding and other considerations may cause some proposed sales to be dropped or moved between years. Current available funding allows for sale offerings averaging 800,000 to 1,500,000 cubic feet of saw timber and 600,000 to 1,000,000 cubic feet of fiber.

Generally, the Division of Forestry may not offer a timber sale unless it has appeared on at least one of the two Five-Year Schedules preceding the sale. Sales are exempt from this requirement if they are 160 acres or less; salvage sales, or emergency sales in areas with fire, insect, or other natural threats. It is the policy of the Division of Forestry however, to include all sales on at least the Five-Year Schedule preceding the sale whenever possible unless waiting for the schedule will cause substantial losses of

economic value on salvage sales, allow for the spread of damaging insects, or preclude a local economic enterprise or forest management project that is in the state’s best interest. (References: AS 38.05.113, AS 38.05.117, and 11 AAC 71.010)

Schedule Review Process

The Review Draft Five-Year Schedule of Timber Sales is submitted for review and comment to several agencies. Comments about specific timber sales from Alaska Department of Natural Resources Office of Habitat Management and Permitting, Alaska Division of Mining, Land and Water, Alaska Department of Environmental Conservation and other agencies are used to draft a Forest Land Use Plan (FLUP) for timber sales in years one and two (AS 38.05.112). The FLUP gives site specific information for each sale describing the location, estimated timber volume, harvest methods, reforestation plan, access, and other potential uses of the sale area. Before any commercial timber sale of ten acres or larger is offered, DOF prepares a FLUP and makes a finding that the sale is in the State’s best interest. The schedule followed by individual FLUPs is then distributed for review by the public. Public comments are considered, and revisions made as appropriate before the schedule is adopted. Sales where the FLUPs have been previously reviewed by the public and agencies are noted on the schedule. Sales that have been reviewed and are currently available over the counter are also listed.

Should you wish to comment on this schedule, you may address your comments to: Douglas Hanson, Alaska Division of Forestry, 3700 Airport Way, Fairbanks, AK 99709, 451-2602. Electronic mail address: douglas.hanson@alaska.gov

Sustained Yield

The Alaska Land Act requires that state land be managed for sustained yield, which is “the achievement and maintenance in perpetuity of a high level of annual or regular periodic output of the various renewable resources of the state land consistent with multiple use” (AS 38.04.910). In each of the years covered in this schedule, the total volume of wood proposed for harvest is far below the potential sustained harvest level determined in the Tanana Valley State Forest Periodic Sustainable Yield Analysis (Parsons, 2000). This publication indicates that the annual sustained yield levels for the Fairbanks and Kantishna Management areas are approximately 12,500 acres and 25,400,000 cubic feet. Thus the proposed average yearly harvest for this schedule, at 1,115 acres and 1,883,720 cubic feet, constitutes less than 10% of the potential sustained harvest.

Annual Sustained Yield

Management Unit	Acres	Cubic Foot Volume
Kantishna	6,245	11,949,600
Fairbanks	<u>6,258</u>	<u>13,425,200</u>
TOTAL	12,503	25,374,800

Annual Proposed Acres and Volume to be Sold

Fiscal Year	Acres	Cubic Foot Volume
2008	918	1,420,000
2009	1,146	2,105,800
2010	1,235	2,192,800
2011	1,130	1,815,000
2012	1,145	1,885,000
FIVE-YEAR TOTAL	5,574	9,418,600

The law, AS 41.17.220 – 230, requires Division of Forestry to develop a management plan for the Tanana Valley State Forest. The management plan guides many of the Division’s management actions. The FYSTS is consistent with the guidelines and direction established in the Tanana Valley State Forest (TVSF) Management Plan. Some of the sales may be for areas outside of the boundaries of the TVSF, and are proposed on state owned forestry classified lands; these sales are consistent with the Tanana Basin Area Plan (TBAP.) Both the TVSF Management Plan and the TBAP are available for review at the Fairbanks Area Office.

Transportation

Forest access roads will be constructed to meet standards stated within the TVSF Management Plan, the TBAP and Best Management Practices for the Alaska Forest Resources and Practices Act. Road construction averages about 7.5 miles a year and is divided roughly 66% winter and 33% all-season road. Individual proposed road segments constructed each year are generally less than 2 miles in length. Most all-season road construction is either spur or secondary road. The only primary road construction anticipated during the five-year schedule period is the extension of Standard Creek Road. By Year-Five the road is proposed to be extended an additional four miles ending at timber sale NC-1400-F.

Initial winter road construction is proposed beginning in Year-One to access NC-1249-F. This road will extend east from the Mosquito Creek all-season road. This winter access along Mosquito Creek will eventually tie into Redmond Creek Trail, a former winter mining road. Additional winter timber sales are located along this route in Year-Four and Year-Five of the schedule. This winter route along with limited all-season access north of Banner Creek will provide access to the east end of the Fairbanks Management Unit. Sales are also proposed and available over the counter that will re-open and extend the winter road system along the Tanana River north and west of Nenana.
