INTRODUCTION

This prospectus is intended to furnish sufficient information to enable prospective bidders to decide whether further investigation of the sale is warranted. Should the prospectus be in error or contradict the sample contract, the sample contract governs. Prospective bidders are urged to examine the timber sale in the field and make their own estimates. Quantities and quality of timber in the contract are estimates and not guaranteed. The sale area and sample contract should be reviewed prior to submission of a bid.

The six units were originally offered during the Mat-Su/Southwest Area Forestry auction dated 29 March 2024. None of the units sold as offered and therefore are being repackaged and renamed to be offered as one multi-unit timber sale. The condition and volume of timber in each individual unit remains unchanged from the auction and original prospectus, however, the estimated stumpage has been revised to reflect the change in sale configuration.

LOCATION AND AREA

The units are located approximately 10 miles east of the city of Willow, Alaska, off Willer-Kash Road in portions of Township 20 North, Range 3 West, Sections 4, 7, 8, 9, 17, 28, 29 Seward Meridian (see Timber Sale Area Maps). These proposed timber sales are designated for harvest and scarification. The timber sale boundaries are shown on the attached Sale Unit Maps and are designated on the ground by the State with pink "timber sale boundary" flagging.

Included herein are the vicinity and sale unit maps. Detailed maps may also be obtained from the **Mat-Su Area Office, Alaska Division of Forestry & Fire Protection, 101 Airport Road, Palmer, AK 99645 or by calling Stephen Nickel at (907) 761-6301.**

VOLUME AND DESCRIPTION OF TIMBER

Timber volumes are estimates based on a cruise conducted by Division of Forestry & Fire Protection (DOF) staff using a variable radius plot method with either a 10 BAF or 20 BAF prism. Volumes were calculated for birch and spruce using **U.S. Forest Service Research Note NOR-5**. The sale was designed to be marketable to the local firewood, poletimber and potentially the saw log industry. The condition or operability of the timber is not guaranteed by the State. The State of Alaska neither expressly nor implicitly warrants its quantity estimate, or the quality or marketability of the timber sold. **Estimates are used only to establish minimum bid. Each PURCHASER is required to estimate their own costs and bid accordingly. Defect was estimated based on a visual tree assessment using visible indicators and experienced averages in the area.**

The proposed Willer Kash sale is 170 acres and has an estimated of 2,758 cords (equivalent to 3065 cunits or 3869 thousand board feet(MBF)). The six units are situated on uplands approximately 800 feet above sea level. The terrain is gently sloping to hilly with short pitches (less than 100 feet in length) of 20-40 percent slopes. Harvesting will utilize the modified seed tree system. Except for wildlife snags, all dead spruce, live spruce 5" and larger in diameter at diameter-breast-height (DBH), and all merchantable birch 6" DBH or larger are intended for harvest. Snags for wildlife use, residual birch less than 6 inches (DBH), and all live spruce less than 5 inches DBH will **not** be cut. A **wildlife snag** is a tree equal to or greater than 6 inches DBH that meets one or more of these conditions: it is actively used by wildlife, has one or more cavities, has signs of decay (conks/mushrooms), in decline (many dead branches in the crown), is dying or dead, has structural defects such as longitudinal cracks, and/or is missing a top.

Unmerchantable Populus sp. (aspen and cottonwood) and willow will be cut incidental to the timber harvest to encourage prolific regeneration from root and stump sprouts for moose browse and wildlife habitat. Logs may be left on site where they lay for use as habitat. Furthermore, the logger will be required to leave at least 3 snags per acre for wildlife use as described in the contract. Where feasible, evenly scattered clumps of 3-5 leave trees will be preferred over single trees to reduce the chance of windthrow, provide better protection for the root systems of the remaining trees, provide additional habitat and cover for wildlife, and serve as a seed source for regeneration. Residual leave trees will be protected from damage during harvest operations.

ACCESS

The sale area is accessed by driving east on Hatcher Pass Road from the Parks Highway in Willow, Alaska at Mile Post 71.2 of the Parks Highway. Travel east on Hatcher Pass Road (also called Willow Fishhook Road) for approximately 6.5 miles to Shirley-Towne Road and turn north. Proceed on Shirley-Towne Road approximately ½ mile to the T intersection in the road which is just across the Willow Creek Bridge on Shirley-Towne Road. Turn east (right) at the T and proceed approximately ½ mile east and north to the Jim Carter Road & the Willer-Kash Road junction at a gravel parking area. Proceed east and north up the Willer-Kash Road for approximately 6.1 miles. State Forestry staff designated the units in the field with pink timber sale boundary flagging. All road improvements and required maintenance along with logging roads or skid trail construction is the responsibility of the purchaser.

The contractor is responsible for maintaining the Willer-Kash Road and all other dirt roads used in connection with this timber sale at all times in as good or better shape as when accessed in order to accommodate other uses of the area and the people that live there. Recreation trails are to remain clear of logging debris and passable throughout the year. Contractors are responsible for any logging road construction, repair, and maintenance including snowplowing if active operations are underway. The purchaser will coordinate traffic control, and timber hauling operations so as to minimize impact on the traveling public, and provide for safety on all roads connecting to the timber sale including the Willer-Kash Road, Jim Carter Road, Shirley-Town Road, Hatcher Pass Road, and the Parks Highway. Any logging or log hauling permits required by the Matanuska-Susitna Borough are the sole responsibility of the successful bidder/contractor.

The sale area is typically available for logging and some hauling activity in all four seasons but will be closed to some logging and all hauling during break up and saturated soil conditions to preserve road surfaces etc. Specifically, the Willer-Kash road system will be closed to log truck and heavy truck hauling on or before April 7th each year due to Spring breakup conditions and the risk of road damage. No rutting will be allowed on any of the roads in, to or from the harvest units.

All roads and skid trails will be required to be maintained to the standards of 11 AAC95.285-.335 of the Forest Resources and Practices Regulations. All logging roads, spur roads, and skid trails will be put to bed by the purchaser upon cessation of use that lasts more than 30 days in duration and upon termination in accordance with the Forest Resources and Practices Regulations on road closure (11 AAC 95.320 and .365) and the contract. For winter roads, log truck hauling on logging & spur roads will be allowed when the underlying ground is frozen sufficiently to support equipment. This requires a minimum of 8 inches of snow and 6 inches of frost, or as approved by the DOF in writing.

The Willer-Kash Road system is used frequently by people mushing dogs, riding snowmobiles & ATV's and by hunters/berry pickers. Purchasers will be expected to factor and reasonably accommodate the public into all of their operational activities on the road systems. The purchaser will be contractually required to post signs as necessary to advise other trail users of logging and trucking operations.

CONTRACT REQUIREMENTS AND STIPULATIONS

The Purchaser will have 30 days from the receipt of the contract for signing to return it to the Mat-Su Area Forester, properly signed and notarized and with the required payment submitted as defined above and in the contract in order to execute the contract.

Scarification to mineral soil will be required over 50% of the upland area in all units. Scarification is the removal of the top grassy brush vegetative matt and root layer, while preserving as much as possible the underlying topsoil. Scarification is usually 6 to 8 inches deep in a grassy forest understory. Scarification is required to be completed within 6-months after harvest or by the time the contract expires. The Scarification Bond will be released back to the contractor after scarification is successfully completed and approved by the State Division of Forestry & Fire Protection. Non-compliance with the scarification requirements of this timber sale will constitute a breach of contract and PURCHASER will be in default. The contractor may forfeit bonds to cover damages suffered by the state in the default of this contract in order to cover the costs of the performance of this requirement to scarify the units of the timber sale. These sales will require the maintenance of access as identified above and in accordance with the contract.

AUTHORITY

The cutting and removal of timber shall be carried out under the authority of the Alaska Statutes, Title 38, Public Lands,

Chapter 05, Alaska Land Act, Article 4, entitled "Disposal of Timber and Materials," and Title 11, Alaska Administrative Code, Chapter 71, Articles 1-5 inclusive, referred to as the "Timber and Material Sales" Regulations.

PERIOD OF CONTRACT

All contract obligations shall be completed within **10 years** of contract execution. In order to protect soil productivity and environmental quality, the State reserves the right to temporarily suspend operations. **Logging must begin within 12 months of the signing of the contract or the Purchaser will be in default of the contract and all stumpage and bid deposits are forfeit to the STATE.**

BONDS

1. Performance Bond. The amount of the performance bond for this sale is **\$2,000** and will be deposited with the State upon execution of this contract.
2. Scarification Bond. **\$21,250**. All units of this timber sale require scarification. A scarification bond will be deposited with the State prior to commencing operations in units to be harvested. The scarification bond will be based on \$125.00/acre. The amount of the scarification bond at a minimum will equal the acreage harvested and unscarified times \$125.00/ acre. The minimum scarification bond is listed in the description of the individual sale units. The purchaser will maintain the bond to reflect the acres to be harvested and not scarified as it changes during the period of this contract.

SALE PROCEDURES-BID DEPOSIT REQUIREMENTS

This is a SEALED BID SALE. To qualify bidders must, prior to the bid opening, **not be in breach of any prior timber sale contract**, and must submit a copy of their current **Alaska Business License**. The business license copy may accompany the sealed bid. Sealed bids, submitted in duplicate, on forms provided by the Division of Forestry, marked on the outside with the timber sale name and number, and addressed to the Mat-Su Area Office, 101 Airport Road., Palmer, Alaska 99645, will be accepted until **2:00 P.M. prevailing time, June 28, 2024**. Sealed bids may also be presented in person to the Mat-Su Area Forester before the bid opening. All bids must be in the physical possession of the Mat-Su Area Forester before bid opening. Bidders are responsible for assuring that their complete bid package is delivered on time.

The State reserves the right to reject any or all bids. For a bid to qualify, prospective bidders will be required to submit a 10% bid deposit of the total bid value, for each sale they are bidding on. Unless all bids are rejected, the sale will be awarded to the responsible qualified bidder offering the highest total bid value for the timber on each sale. The bidder will submit their total bid price for this sale. The bidder's submitted price will be the minimum lump sum that the purchaser will pay for the timber in the sale area regardless of the quantity of timber removed.

The minimum acceptable total bid price for the timber is \$13,780.

BIDS MUST BE SUBMITTED ON FORMS PROVIDED BY THE STATE AND CAN BE OBTAINED AT <https://forestry.alaska.gov/timber/matsu> AND ARE INCLUDED IN THE APPENDIX.

If a tie in the high sealed bid occurs, the successful bidder will be determined by lot at the time of bid opening.

If bidding as an agent for an individual, partnership, or corporation, the agent must submit with the bid a notarized power-of-attorney authorizing such agency. No agent may represent more than one principal, or bid in competition with the agent's principal.

1. Persons interested in these timber sales are encouraged to visit the sale areas, review logging and road cost estimates, road construction standards, and scarification requirements and standards prior to bidding.

2. The State reserves the right to reject any and all bids. A bid will be rejected if it contains a condition or qualification on, or a material alteration of, the terms specified. A bid will be rejected if it is submitted without the required cash or cashiers' check in the amount of the bid deposit.
3. Sales for which no sealed bids are received may be offered over-the-counter without re-advertisement.
4. All of the successful bidder's deposits will be credited to the total amount due to the State of Alaska for stumpage or bonds.
5. The deposits furnished by the unsuccessful bidders shall be returned immediately to the unsuccessful bidders. The deposits furnished by the high bidder whose bid was declared acceptable shall be retained as liquidated damages if the high bidder does not execute the contracts and furnish satisfactory bonds within thirty (30) days of receipt of the contract for execution.
 - a. A deposit of cash, certified check, money order, cashier's check or any combination of these in favor of the Department of Natural Resources, equal to ten percent (10%) of the total amount bid. The PURCHASER may apply the bid deposit to the timber sale bond. If the high bidder fails to execute the contract within the allotted 30 days, the bid deposit will revert to the State of Alaska.

PAYMENT

PURCHASER'S Bid Deposit is due the day of the auction and it shall be applied to the Stumpage Fee Payment on the unit. The remainder of the *accepted bid* for the sale shall be due the State as stumpage fees. The Purchaser shall make the stumpage fee payment for the unit, which includes the Bid Deposit, and also pay the Performance Bond to the State on or before the contract execution date. The contract execution date is 30 days after the date of the timber sale auction.

METHOD OF PAYMENT

These are "lump-sum" sales. The PURCHASER shall pay the full contract price for the sales, or any payment unit of the sales, before any timber may be cut or removed from the sales. Stumpage payments are non-refundable.

RESERVATIONS

The state reserves the right to waive technical defects in this prospectus and reject any and all high bids. The State reserves the right to award the timber for the amount of the next high bid to the next highest bidder if the Director considers the highest bidder unqualified to fulfill the requirements of the contract, or if the contract is not executed by the highest bidder. The State also reserves the right to waive any informality in the bids received whenever the waiver is in the best interests of the State. The State also reserves the right to waive technical defects in this advertisement in the best interest of the State.

TIMBER HARVEST PERMITS

A Timber Harvest Permit may be required by the Borough for forestry projects larger than 40 acres. Contact the MSB in Palmer at (907) 745-9863 regarding compliance with this ordinance.

GENERAL

Further information, including copies of this prospectus, bid form and sample contract may be obtained at the following web site, <https://forestry.alaska.gov/timber/matsu> or by writing to Stephen Nickel at the Mat-Su Area Office, Alaska

Division of Forestry & Fire Protection, 101 Airport Road, Palmer, AK 99645 or by calling (907) 761-6301. The information and documents may also be picked up in person, by prior telephone arrangement, at the Mat-Su Area Office.

AUTHORITY

The cutting and removal of timber shall be carried out under the authority of the Alaska Statutes, Title 38, Public Lands, Chapter 05, Alaska Land Act, Article 4, entitled "Disposal of Timber and Materials," and Title 11, Alaska Administrative Code, Chapter 71, Articles 1-5 inclusive, referred to as the "Timber and Material Sales" Regulations.

TIMBER SALE UNIT DETAILS

All six of the units described below will be sold as a single, **170 acre** timber sale containing an estimated combined volume of **2,758 cords (equivalent to 3,869 MBF or 3,065 cunits)** of paper birch, white spruce and black spruce. A detailed description of units can be found below.

Unit 12 and 188

These two harvest units are a combined 49.5 total acres. Both are comprised of a mixture of sawtimber and poletimber size birch and white spruce. These units are unlogged and the boundaries are flagged with pink "Timber Sale Boundary." White spruce are beetle-killed, average 7" DBH, and average 48 feet tall. The birch are predominately 9-12" DBH and average 66 feet tall. Both units include an island of trees that will remain unharvested to meet Susitna Forestry Guidelines and to retain habitat values. Defect is estimated at 10%.

An ATV trail runs through part of the northern unit that may be used, in part, for access. It is approximately 0.3 miles and will need to be improved and widened. A road will need to be constructed into the southern unit from the northern unit, estimated to be 0.25 miles in length.

Unit 57 and 169

These two units are a combined 52.4-acres. Access to this unit is partially constructed, an ATV trail runs approximately 0.25 miles beyond an old sale unit and will need to be improved to facilitate harvest operations. The remaining .25 miles will need to be constructed to access the units. A road will need to be constructed into unit 169, estimated to be 0.4 miles in length beyond the boundary unit 57. The proposed road layout follows the high ground between the two units.

Unit 169

Unit 169 is 18.4 acres in size and is composed primarily of poletimber birch, with a minor spruce component. Birch range from approximately 8" to 11" DBH and average 53 feet tall, while white spruce range from about 8-9" DBH and average 61 feet tall. Most of the spruce are beetle killed and have varying levels of decay in the lower portion of the stem. This sale unit is situated on an elevated peninsula-like bench above muskeg. There are short pitches (less than 100 feet in length) of 40-50 percent slopes. An important dog mushing trail runs north/south in the western part of the unit that will need to be protected and kept free of debris. Boundaries of the unit are flagged with pink "Timber Sale Boundary." Defect is estimated to be 10% in this unit.

Unit 57

This 34 acre unit is composed primarily of poletimber birch with a minor spruce component. Birch range from approximately 9-11" DBH and average 57 feet tall, while white spruce range from approximately 9-10" DBH and average 65 feet tall. Most of the spruce are beetle killed and have varying levels of decay in the lower portion of the stem. Defect is estimated at 5% in this unit. There are short pitches (less than 100 feet in length) of 40-50 percent slopes, however terrain is generally rolling topography. Boundaries of the unit are flagged with pink "Timber Sale Boundary." This unit includes an island of trees that will remain unharvested to meet Susitna Forestry Guidelines and to retain habitat values.

Units 174 and 175

These two units, 31 and 37 acres respectively, are comprised mainly of paper birch and white spruce poletimber. Birch are generally between 9” and 12” DBH, and spruce 7”-10” DBH. Both species average approximately 50 feet tall. There is an estimated 15% defect in unit 174 and 10% defect in unit 175. Most of the spruce in both units are beetle killed. Boundaries of the unit are flagged with pink “Timber Sale Boundary.” Both units include an island of trees that will remain unharvested to meet Susitna Forestry Guidelines and to retain habitat values. An ATV trail runs east-west in unit 174 that may be used, in part, to access the units. It is approximately 0.1 miles to the unit boundary from the Willer Kash Road and will need to be improved and widened for access. A road will need to be constructed into unit 175, estimated to be 0.25 miles in length.

BID AND DEPOSIT FOR ADVERTISED TIMBER

Subject to the provisions below, the following bid is submitted for the timber to be removed from the state timber sale: _____

Sale Name

Sale Number:

SPECIES	PRODUCT	ESTIMATE VOLUME	UNIT OF MEASURE	MINIMUM UNIT PRICE	BID UNIT PRICE	TOTAL PRICE BID
GRAND TOTAL BID: \$						

One Cunit = 100 Cubic Feet

THE BIDDER AGREES:

1. At the time of bidding, if bidding as an agent for an individual, partnership, corporation, or other legally established firm, to submit a letter of authorization creating such agency to the Selling Agent.
2. To, within 30 days of award of sale, execute a contract of sale and furnish a satisfactory performance bond.
3. To furnish, if requested, satisfactory evidence of financial and legal competence to perform the obligations of the contract.
4. That the bid deposit may be retained by the State as liquidated damages, if the sale is not completed as specified in the published notice of sale.
5. That the bid deposit of the successful bidder shall, upon execution of the contract, be credited, as a stumpage deposit to the amount due the State for stumpage as required by the contract of sale.
6. That, if the contract of sale is terminated due to failure of the purchaser to comply with the terms of the contract or the "Timber Sale Regulations", any unused stumpage deposit may be retained by the State as liquidated damages.

It is understood that a bid of less than the advertised price for any species will invalidate this bid as a whole, and that bids will be evaluated on the basis of total return to the State.

The bidder transmits herewith a _____ for 10% of the Grand Total Bid in the sum of
(certified check, money order, cashier's check)
 _____ dollars (\$ _____) payable to the Alaska Department of Revenue, as required by the published notice of sale.

TIMBER SALE CONTRACT

***Willer Kash Reoffer
SC-3204M
ADL 234288***

The State of Alaska, represented by the Director, Division of Forestry, Alaska Department of Natural Resources or his authorized representative under authority of Alaska Statutes, Title 38, Public Lands, Chapter 05, Alaska Land Act, Article 4, entitled "Disposal of Timber and Materials, hereinafter called the STATE, does hereby agree to sell, and **Purchaser**, hereinafter called the PURCHASER, does hereby agree to purchase timber as designated herein, subject to the following terms and conditions. This Contract is effective as of **Effective Date** ("Effective Date").

In consideration of the mutual covenants and agreements herein contained and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged, the STATE and PURCHASER hereby agree as follows:

1. **DEFINITIONS**

Definitions shall include all terms defined by 11 AAC 71.910 Definitions and the following. If there is a conflict of definition the regulations shall govern.

A. "Construction Materials" includes rock, sand, gravel and other construction materials located in the Timber Sale Area.

B. "Cord" represents 85 cubic feet of solid wood cut and stacked and that occupies a space that is 4' high x 4' wide x 8' feet long.

C. "Cunit" is a measure of solid wood that is 1.18 cords. This unit is a measure of all birch on the timber sale larger than 6" in diameter at breast height (DBH) and all spruce Utility Logs that are cut by the purchaser and have a diameter greater than 5" in diameter but won't make requirements for a saw log.

D. "Environmental Contamination" means pollution resulting from the "release" [as that term is defined in AS 46.03.826(9)] of a "Hazardous Material."

E. "Hazardous Material" means hazardous substances or materials as defined in Alaska Statutes 46.03.826 and 46.08.900, in 42 U.S.C. § 9601-9657 (CERCLA), in 42 U.S.C. § 9601 (RCRA) and in 40 C.F.R. U.S.C. § 302, as such statutes and regulations may be amended from time to time, and any hazardous and toxic substance, material or waste which is or becomes regulated by any governmental authority. Without limiting the foregoing, "Hazardous Material" includes hydrocarbon fuels such as diesel oil and gasoline, and lubricating oil.

F. "Laws" mean all applicable federal, state or local statutes, regulations, rules, ordinances or permits, orders, directives, and amendments thereto, in effect during the Term of this Contract and as they legally change over time.

G. "MBF" means one thousand board feet, Scribner (long log) log scale rule.

H. “Merchantable Timber” is all timber, harvested or unharvested, which contains at least one Merchantable Sawlog and all Utility Logs harvested or unharvested located within the Timber Sale Unit(s) designated by the State within the Timber Sale Area as depicted in Exhibit A that will be harvested in accordance with the approved Operating Plan. This excludes all timber in designated retention areas.

I. “Operating Plan” means the document developed by the PURCHASER and approved by the STATE in order to communicate the PURCHASER’S planned schedule for road construction and harvesting operations, referenced in Paragraph 9 (Timber Operations) herein.

J. “PURCHASER” means the purchaser of timber, purchaser’s agent, employees, representatives, contractors, subcontractors or other individuals or entities operating on behalf of PURCHASER.

K. “Road Standards” means road and bridge construction, maintenance, and closeout standards required herein and by Law.

L. “Roads and Related Transportation Facilities” include all roads, bridges, landings, culverts, and any other transportation facility PURCHASER is authorized to use or to construct pursuant to this Timber Sale Contract.

M. “Slash” means all woody debris resulting from PURCHASER’S Timber Operations or from construction of roads and related transportation facilities or other improvements.

N. “Timber” means all trees, living or dead, standing or down, located within the Timber Sale Area.

O. “Timber Harvest Settings” means the sub-units of Merchantable Timber located within the Timber Sale Unit, as designated by PURCHASER in the approved Operating Plan (Exhibit C).

P. “Timber Harvest Unit(s)” means the unit(s) of Merchantable Timber located within the Timber Sale Area, as designated by the State in Exhibits A and B.

Q. “Timber Sale Area” means the real property upon which it is reasonably necessary for PURCHASER to conduct Timber Operations under this Contract as depicted on Exhibit A and described in Exhibit B. In the event of any conflict between Exhibit A and B, Exhibit B will control.

R. “STATE Land” means land owned by the State of Alaska, and interests and resources in the land, including improvements to the land.

S. “Utility Logs” are logs that do not meet the minimum requirements of No. 4 or better sawmill grades, but are suitable for the production of firm useable pulp chips to an amount of not less than 50% of the gross scale with a minimum gross diameter of 6 inches on the small end, minimum gross length of 12 feet, plus trim.

2. SALE OF MERCHANTABLE SAWLOGS:

STATE sells to PURCHASER, and PURCHASER purchases from STATE, all of the Timber, whether standing or down, within the Timber Sale Area as depicted on Exhibit A and described in Exhibit B, at the price and upon the terms set forth herein, whether harvested or not, subject to the provisions under Paragraph 11C (Risk of Loss).

3. RESERVATIONS:

The STATE reserves the right to permit other compatible uses of the lands in the contract area which do not unduly impair the PURCHASER'S operations under this contract, as determined by the STATE. The PURCHASER will avoid using the access roads when doing so could damage the roads. Use of access roads may be suspended during breakup or other wet weather conditions at the discretion of the State. The STATE hereby reserves the right to use any road constructed by the PURCHASER under this contract for any and all purposes in connection with the protection and administration of State lands. Roads constructed and/or used by the PURCHASER under this contract may be used by third parties in connection with the utilization of STATE or other resources adjacent to the road; provided, that on spur roads, such use shall not materially interfere with the operations of the PURCHASER.

4. RIGHTS OF ENTRY AND USE:

During the Term of this Contract and to the extent it is legally authorized to do so, the STATE hereby grants to PURCHASER the non-exclusive right to enter upon and use the Timber Sale Area and associated access routes across STATE land solely in accordance with the terms of the approved Operating Plan and other applicable provisions of this Contract.

The granted rights include the right to construct Roads and Related Transportation Facilities to and within the Timber Sale Area and to use Construction Materials within the Timber Sale Area. Road construction will be as flagged and depicted on Exhibits A and F, unless otherwise specifically approved in writing by the STATE. Said rights will be exercised as reasonably necessary and at PURCHASER's cost in strict accordance with the approved Operating Plan, applicable provisions of Law, and other applicable provisions of this Contract. Construction Material rights granted hereunder shall not be used to provide benefits to parties other than PURCHASER. The PURCHASER will compensate the STATE for any value lost through unauthorized use of Construction Material.

PURCHASER shall fell, yard, remove, scale, and pay the applicable stumpage fee for all Merchantable Timber harvested in association with the rights of entry and use granted herein.

5. TERM OF CONTRACT:

The Term of this Contract shall commence upon the Effective Date and terminate on **TERMINATIONDATE**, or the date that all obligations under this Contract have been completed, whichever is earlier. Notwithstanding the above, Timber Operations shall cease on or before **TERMINATIONDATE**, except as provided otherwise herein.

If PURCHASER is prevented or delayed from performing any of its obligations under this Contract by reason of fire, strikes, riots and civil commotions, war and acts of public enemies, storms, floods, and other unusual climatic conditions, including droughts, and acts of God, and any other such cause which is similar in nature to the foregoing and which is beyond the control of PURCHASER ("Force Majeure") the Term shall be automatically extended for the period that such Force Majeure continues in effect plus an additional reasonable period thereafter, to be mutually agreed upon in writing by the STATE and PURCHASER, to allow for harvest and removal of the Timber within the Timber Sale Area. All other terms and conditions of this Contract will remain in effect during periods of Force Majeure. Lack of

funds on the part of PURCHASER, adverse market conditions, STATE approval or assistance delays, and/or similar conditions shall not constitute Force Majeure.

In the event that PURCHASER desires to extend the term of this Contract for reasons other than Force Majeure, such extension may be granted by the STATE, at the STATE's sole discretion, in consideration for the advance payment of \$1,000.00. The total extension time may not exceed one year. If the contract is extended, the State may enter into redetermination of the stumpage fees with the Purchaser if it deems it in the State's best interest.

6. PAYMENTS

A. **Total Stumpage Payment.** PURCHASER shall pay a total lump sum stumpage payment to the STATE as set forth below. The stumpage payment is due the STATE without regard to whether the harvest and marketing of the Merchantable Sawlogs and Fuelwood was or will be profitable for PURCHASER. The agreed upon total lump sum stumpage payment is in the amount of \$*amount*, (*amount written out in dollars, U.S.*).

B. **Stumpage Payments.** The PURCHASER must pay for timber in advance of harvest operations in the sale area. Under no circumstances may timber be cut or removed from the sale area without prior payment to the STATE. The initial bid deposit will be applied towards the stumpage payment. The PURCHASER shall make an advance stumpage payment to the STATE at the time of signing the contract for the entire unit less the bid deposit. Payments must be delivered to the State's representative as listed in Paragraph 15 (Notices).

Sale payments for this timber sale will be based on one payment described as follows:

UNIT NAME, \$*amount* **100% of total lump sum stumpage payment**

C. **Redetermination of Payment.** The State may redetermine the stumpage payment due the STATE in the following conditions:

1. Contract extension.
2. Work was or is to be performed by the PURCHASER at the State's written request outside the scope of the original timber sale contract.

D. **Redetermination Method.** The State will redetermine the stumpage payment based on the existing conditions at the time that the redetermination occurs. Redetermination will not change the meaning or intent of the contract. The STATE and PURCHASER will negotiate to an agreement of redetermined payment in good faith. In the event that PURCHASER and the STATE cannot agree on the redetermined rates, the existing contract will govern all actions.

7. PASSAGE OF TITLE

A. The State maintains title to all logs until they are removed from the Timber Sale Area. Subject to Paragraph 10 herein, the timber within the Timber Sale Area may be removed from the Timber Sale Area when the entire lump sum stumpage fee is paid in full. The risk of loss or damage will be allocated as provided in Paragraph 10 (Risk Management) herein.

8. COMPLIANCE WITH LAWS AND OTHER REQUIREMENTS

A. **Compliance with Laws.** PURCHASER must carry out all Operations, in compliance with the Law. Responsibility for operating in compliance with Laws and rectifying any instances of non-compliance rest solely with PURCHASER. The PURCHASER must also comply with the specific requirements of applicable laws specified in this contract that apply to this timber sale.

B. Responsibility for Acquisition of Permits, Authorizations and Approvals. PURCHASER is responsible for the acquisition of necessary permits, licenses, fees and other regulatory approvals at its cost. This timber sale requires that the PURCHASER notify the Mat-Su Borough (MSB) in Palmer and acquire, if needed, the MSB Timber Harvest Permit and Road Access Permit.

C. Notification of Violation. Within twenty four (24) hours of PURCHASER's knowledge, PURCHASER must notify the STATE and applicable regulating agencies of any regulatory or permit violations that have occurred as a result of actions by PURCHASER, or PURCHASER's agent, representatives, contractors, subcontractors, or other individuals or entities operating on behalf of PURCHASER.

9. TIMBER OPERATIONS

A. Operating Plan Requirements. Unless otherwise provided for, PURCHASER shall be responsible for performing based on existing road and unit layout and design. Purchaser must do so in strict compliance with applicable Laws and the approved Timber Sale Operating Plan. The PURCHASER must prepare and submit to the STATE on or before the execution of this contract, a written logging plan meeting the requirements of Exhibit I and providing for the orderly and progressive development of all operations necessary to complete this contract. The logging plan is ineffective until it is APPROVED by the STATE, which must occur prior to the start of operations. Operating without a representative on site and an approved and logging plan is grounds for suspension. This plan must be updated annually and whenever there is a change in the PURCHASER'S operation.

B. Timber Utilization Standards. Unless otherwise mutually agreed upon by the STATE and PURCHASER, PURCHASER must conduct its Timber Operations in accordance with the following Utilization Standards:

- (1) PURCHASER must harvest Timber in such a manner as will ensure that all the Merchantable Timber designated for harvest within the Timber Sale Area is utilized;
- (2) Except as otherwise set forth below, PURCHASER must ensure that stumps left after logging are cut as low to the ground as practicable, and in any event are not higher than twelve (12) inches above the ground on the side of the stump where the elevation of the ground is the highest. High stumps must be paid for by the PURCHASER at the rate of \$5.00 per stump, which sum shall be regarded as fixed, agreed, and liquidated damages;
- (3) PURCHASER must vary log lengths to provide for as complete a utilization of all the Merchantable Timber in the Timber Sale Area as is practicable; and
- (4) The STATE shall have the right to require PURCHASER to remove unyarded Merchantable Timber that has been left on the ground from the Timber Sale Area;
- (5) The PURCHASER shall not leave cut spruce larger than 5 inches in diameter and logs longer than 4 feet in length for more than one year after harvest on the Timber Sale or within the Timber Sale Area except at a pre-approved log transfer location off of the Timber Sale. This is required to remain in compliance with the Alaska Forest Resources and Practices Act and Regulations, specifically 11 AAC 95.195 Clearing of Spruce Trees;
- (6) The PURCHASER may leave cut birch larger than 6" in diameter and logs longer than four feet (4') on the Timber Sale but only in decks at designated landings. Birch timber left on the Timber Sale becomes the property of the STATE after the Timber Sale Contract expires, and its disposal is at the sole discretion of the STATE.
- (7) The Purchaser shall have the option to leave or burn unmerchantable logs treated as described above at the landings on this sale or remove them from the sale area at the PURCHASER's discretion during the time of this Contract. At no time may these utility

decks obstruct the STATE's future use of the land. Under no circumstances may a log deck be located so as to obstruct or hinder water quality. Title remains with the State until logs are removed from the Sale Area.

C. Slash Disposal. PURCHASER must comply with all applicable Laws relating to the disposal or accumulation of slash and with the conditions set forth in Exhibit "C".

D. Reforestation. The parties anticipate that reforestation requirements will be met through natural regeneration. Except as provided in Exhibit C (Logging Requirements), the STATE is responsible for all reforestation obligations required under applicable Laws. PURCHASER must take reasonable actions to facilitate natural regeneration, as described in the approved Operating Plan. Notwithstanding any of the above, PURCHASER is responsible for reforestation of areas where PURCHASER's Timber Operations have materially damaged or impeded an area's ability to naturally regenerate.

E. Roads. PURCHASER must, at its cost, construct, reconstruct, and improve roads in accordance with applicable laws, the approved Operating Plan and the Road Construction and Maintenance Requirements in Exhibit E. It is the responsibility of the PURCHASER to enter into agreements with adjoining land owners as to any shared use maintenance requirements, or fees, paid by PURCHASER on roads owned or maintained by other entities, including, but not limited to private, federal, state and local landowners or administrators. PURCHASER must obtain all necessary road use permits, agreements and approvals prior to commencing operations. All borrow and waste areas utilized in the construction or maintenance of the roads and facilities by the PURCHASER require the submittal of development plans and approval by the State prior to development. The location and construction of all landings must be submitted to and approved by the State prior to use and construction by the Purchaser unless they are already identified on the approved timber sale unit maps. The PURCHASER is responsible for all repairs and mitigation deemed necessary by the State due to unauthorized roads and landings. PURCHASER must additionally pay stipulated damages of \$1,000.00 for each unauthorized construction development. This provision does not supersede any applicable penalties under the Alaska Forest Resources and Practices Act (AFR&PA) (AS 41.17, 11 AAC 95).

F. Maintenance. During the Term of this Contract, PURCHASER, at its cost, must maintain the Timber Sale Area, Roads and Related Transportation Facilities, and all other improvements used by PURCHASER in connection with this Contract, in a clean, sanitary and safe condition and in accordance with applicable Laws, the approved Operating Plan, and the provisions of this Contract. PURCHASER may share maintenance obligations with other Authorized Users of the Timber Sale Area, subject to the terms and conditions of joint use agreements that are approved in writing by the STATE. Clean-up measures and other maintenance must be kept reasonably current with timber harvest operations.

G. Fire. The PURCHASER must take all necessary precautions for the prevention of forest fires and shall be responsible for the suppression costs of any and all destructive or uncontrolled fires occurring within or without the contract area resulting from any and all operations involved in the removal of the timber under the provisions of this contract. AS 41.15.050 established the fire season from April 1 - September 30, inclusive, during each year. AS 41.15.080 requires every person owning or operating a sawmill or logging camp or other commercial plant or operation on forested lands to post and keep displayed at all times in a conspicuous place upon the building or ground of the milling, logging, or commercial operation a copy of AS 41.15.050-080 and AS 41.15.140.

(1) Prevention and Suppression. During the Term of this Contract, PURCHASER must make every effort to prevent and suppress fires within the Timber Sale Area. Unless otherwise required herein, or prevented by circumstances, over which PURCHASER has no control, PURCHASER must place its equipment, employees, contractors, and

employees of contractors at the disposal of any authorized government employee for the purpose of fighting forest fires within or near the Timber Sale Area.

(2) Presence of Fire Equipment. PURCHASER must ensure that both the road building crew and logging crews have adequate firefighting equipment and training for use on site when operating in the Timber Sale Area, pursuant to the approved Operating Plan. In the event of "extreme fire danger," PURCHASER must maintain a fire watch at the active Timber Operation areas for a minimum of one hour after work has stopped for the day, unless the STATE suspends Timber Operations until the fire danger is reduced.

(3) Reporting. PURCHASER must report all fires to the Alaska Division of Forestry & Fire Protection in Palmer at (907)761-6311 immediately after becoming aware of a fire or imminent threat of fire.

H. Timber Trespass. Unless otherwise agreed, PURCHASER may not fell or damage any tree not within the boundary of the Timber Sale Area. PURCHASER shall be liable for all trespass damages and must properly locate its operations within the Timber Sale Area. In the event of trespass damage to State timber outside of the Timber Sale Area, the STATE will appraise the damage and assess PURCHASER the cost of such appraisal plus treble damages (triple stumpage), at the sole discretion of the STATE. This provision does not supersede any applicable penalties associated with the Alaska Forest Resources and Practices Act (AFR&PA) under AS 41.17, 11 AAC 95, nor does it supersede any remedies other landowners may have under applicable laws.

I. STATE Inspections. The STATE and its representatives, shall at all times have access to observe and inspect the Timber Operations of PURCHASER and must be furnished such information, documentation and assistance by PURCHASER as may be reasonably requested by the STATE for the purpose of ensuring compliance with this Contract and applicable Laws. PURCHASER must complete additional work as requested by the STATE, consistent with the approved Operating Plan and requirements of this Contract.

J. Emergency Repairs by the STATE. In the event PURCHASER refuses to make a repair of an emergency nature to improvements or structures in the Timber Sale Area after requested to do so by the STATE or regulatory agency, except when these emergency repairs result from the gross negligence of STATE, the STATE shall be entitled to make the repairs and bill PURCHASER for the actual cost of making such repairs. Emergency repair of improvements or the sale area necessary to keep the Purchaser in compliance with federal, State, and local laws and regulations is the PURCHASER'S responsibility. If the emergency repairs are not required by law or in this contract, the State will reimburse the purchaser for the cost of repairs. All emergency work covered by this contract must be authorized in writing by the STATE prior to commencing unless prevailing conditions will cause imminent and significant irreparable damage to the State's resources.

K. Facilities Construction. Any improvements or transportation facilities, including sawmills, buildings, bridges, roads, etc, constructed by the PURCHASER in connection with this sale and within the sale area or on other State land leased for the purposed, must be done in accordance with standard or special plans approved by the STATE. Bonding may be required on each improvement. The STATE neither expressly nor implicitly warrants its improvement estimates. Estimates will be made for the sole purpose of establishing the minimum bid, and are not to be used for other purposes.

L. Use of Timber Sale Area. The PURCHASER may only use the Timber Sale Area for actions related to the harvest of Merchantable Timber. The Timber Sale Area may not be used for any other commercial purpose. Existing facilities owned by the STATE in the sale area, including but not limited to roads, bridges gates, culverts, and signs may be used by the PURCHASER in connection with this sale without further approval unless such use is limited or prevented elsewhere in this contract. Existing improvements used by the PURCHASER must be kept in good repair by the PURCHASER.

M. Fish Spawning Waters. All operations in connection with this contract adjacent to lakes, streams, or important fish waters must be conducted so as to avoid stream silting and must not interfere with the passage of fish or injure the spawning grounds, in accordance with AS 41.14.

N. Archeological Sites. If, during the course of operations, any physical remains of historic, archaeological, or paleontological nature are discovered, work in that immediate vicinity must cease and the State must be notified. The Alaskan Historic Preservation Act prohibits the appropriation, excavation, removal, injury, or destruction of any historic, prehistoric or archaeological resources of the State.

O. Monuments and Markers. The Purchaser must protect all known land survey monuments and witness trees and markers from damage or obliteration. If monuments or markers are destroyed, the PURCHASER must pay the costs of restoration. No painted, blazed or tagged tree which marks the boundary of the sale area or cutting units may be cut unless approved in writing by the State. The PURCHASER must pay the STATE stipulated damages of \$100.00 for each boundary tree and leave tree that is cut or damaged, as determined by the Forester-in-Charge. Assessed damages are not limited to the bond amount.

10. RISK MANAGEMENT

A. Indemnification. PURCHASER shall defend, indemnify, and hold the State harmless from any and all claims, demands, suits, loss, liability and expense, for injury to, or death of persons and damage to, or loss of property arising out of, or connected with the exercise of the privileges granted the PURCHASER by this contract.

B. Insurance Requirements. PURCHASER, its contractors and subcontractors must purchase, at its own expense, and maintain in force at all time during the Term of this Contract the policies of insurance specified in Exhibit G from an insurer qualified to do business in Alaska. Where specific limits are shown, it is understood that they are the minimum acceptable limits, and if the policies contains higher limits, the STATE and the additional insureds hereunder shall be entitled to those higher limits. The policies must each name the STATE as an additional insured. The STATE must be provided with certificates of insurance and copies of the policies, a minimum of fifteen (15) days prior to commencing Timber Operations. The policies must provide that coverage shall not be canceled, limited, or allowed to expire until after thirty (30) days written notice has been given to the STATE. The STATE shall have the right, at its option, to pay any delinquent premium on any of the policies if necessary to prevent a cancellation, non-renewal or material alteration thereof; and PURCHASER must within five (5) business days, reimburse the STATE'S expenditure. In the event that any insurance policy is canceled or the policy is materially changed, PURCHASER must immediately notify the STATE and cease Timber Operations until certificates of insurance are delivered to and approved in writing by the STATE. The STATE reserves the right to reasonably increase the required insurance coverage limits to be in accordance with the current industry standards by giving 30 days written notice to PURCHASER.

C. Risk of Loss. The risk of loss by fire, windstorm, or other cause of any standing, decked or down Merchantable Timber within the Timber Sale Area shall be borne by the holder of title to the timber or logs. The State is not obligated to supply, nor is the PURCHASER obligated to accept and pay for, other timber in place of the destroyed or damaged timber. The loss or damage to timber removed from the sale area under the contract is borne by the Purchaser. This section alone does not relieve either party of liability for negligence.

D. Bonds

- 1) **Performance Bond.** At the time of executing this contract, PURCHASER must deposit with the STATE two thousand dollars (\$2,000.00) in the form of a cashiers check, money order, time certificate of deposit (with automatic renewal) in the State's name in trust for the purchaser, or surety made payable to the STATE. Bonding must conform to 11 AAC 71.095. If cash is used for the Performance Bond it will be placed by the State in a separate state account and all interest on the Performance Deposit shall accrue to the benefit of STATE. If PURCHASER is in default under this Contract and has received notice of such default from the STATE, but has failed to cure such default, the STATE may apply said Performance Bond to pay for the performance of the default obligation and any of the STATE's expenses or damages incurred as a result of PURCHASER's default. PURCHASER shall remain liable for any deficiency that remains after application of the Performance Bond to any amount owed and within ten (10) days of STATE's said application, PURCHASER must deposit that sum of money necessary to maintain a Performance Bond of two thousand dollars (\$2,000.00).
- 2) **Scarification Bond.** A scarification bond will be deposited by the PURCHASER to the STATE **prior to commencing operations.** The scarification bond will be based on \$125.00/acre. The amount of the scarification bond at a minimum will equal the acreage harvested and unscarified times \$125.00/ acre. The minimum Scarification Bond to be deposited by the PURCHASER to the STATE for this sale is **twenty-one thousand two hundred fifty dollars (\$21,250).** Scarification bonding will be paid and administered by the STATE and the PURCHASER as described above in Performance Bond. Required bonding will increase or decrease as scarification is owed or accomplished. The PURCHASER will pay more Scarification Bond to the STATE if more acreage is harvested without being scarified in accordance with STATE requirements identified in Exhibit C. The purchaser will maintain the bond to reflect the acres to be harvested in the operations plan as it changes during the period of this contract. The STATE will seasonally determine the adequacy of the scarification completed by the purchaser and will adjust the scarification bond held proportionally to the acreages actually scarified. If the purchaser fails to complete scarification as required under this contract and has received notice of such default from the STATE, but has failed to cure such default, the STATE may apply said scarification bond to pay for the performance of the scarification obligation and any of the STATE's expenses or damages incurred as a result of PURCHASER's default.

11. ENVIRONMENTAL COMPLIANCE, PROTECTION AND SAFETY

A. **Hazardous Materials.** PURCHASER must not cause or permit to be brought upon, stored or used in or about the Timber Sale Area, or the Roads and Related Transportation Facilities by PURCHASER, its agents, employees, contractors, or invitees, any Hazardous Materials without the prior written consent of the STATE, which will not be unreasonably withheld by the STATE so long as PURCHASER demonstrates to the STATE's satisfaction that such Hazardous Materials are reasonably necessary to PURCHASER's Timber Operations and will be used, kept, and stored in a manner that complies with all Laws regulating any such Hazardous Materials.

B. **Fuel Storage, Fueling, Maintenance and Spill Prevention.** The STATE hereby consents that PURCHASER may bring upon, and use necessary fuel, lubricating oil, hydraulic fluids, explosives and anti-freeze substances in the Timber Sale Area, and the Roads and Related Transportation Facilities, during the Term of this Contract only to the extent such items are transported, used, and disposed of in a manner that complies with all Laws and the terms of this Contract. PURCHASER must maintain and use mobile fuel storage, refueling and maintenance facilities (including facilities for the

collection of waste oil) and must do so in accordance with all applicable Laws. No fixed tank storage is allowed on the sale area. The PURCHASER must have adequate absorbent and cleanup materials on site and in all vehicles and machinery used in the Timber Sale Area to contain spills related to fueling, maintenance and repair operations and damage likely to be sustained in the course of operations. Fuel storage facilities must not be placed within 100 feet of water bodies. Refueling of equipment must not occur on the active flood plain of a water body. Vehicle maintenance, campsites, and/or storage and stockpiling of material on the surface ice of lakes, ponds or rivers are prohibited.

C. Sanitation. The sale area must be maintained in a clean and sanitary condition during the operations of the PURCHASER. Any foreign materials or wastes such as cans, bottles, barrels, garbage, equipment, equipment parts, or other debris resulting from this operation must be removed from the sale area as they are used and at the latest, upon completion of operations on any cutting unit.

D. Immediate Cleanup of Environmental Contamination. In the event PURCHASER becomes aware of any Environmental Contamination within the Timber Sale Area, PURCHASER must immediately notify the STATE and the Alaska Department of Environmental Conservation of any such Environmental Contamination and (unless provided for otherwise in a STATE-approved joint use Contract between PURCHASER and other Authorized Users of the Timber Sale Area) must immediately take all actions at its sole expense as are necessary to contain and cleanup Environmental Contamination in a manner consistent with the requirements of Law. Without limiting PURCHASER's containment and cleanup obligations herein, to the extent that it is economically reasonable to do so, PURCHASER must return the affected area to the condition existing prior to the introduction of any such Hazardous Materials.

12. DEFAULT BY PURCHASER

A. Events of Default by PURCHASER. Any of the following shall be deemed an event of default by PURCHASER ("Event of Default"):

- (1) Any representation or warranty made by PURCHASER that proves to be false in any material respect;
- (2) PURCHASER's failure or refusal to perform, fulfill, or observe any provision in this Contract or State law, or PURCHASER's breach of any covenant in this Contract; or
- (3) If PURCHASER has a receiver appointed for all or any significant part of its assets, becomes insolvent, files a petition in bankruptcy or for reorganization, liquidation, or relief under any bankruptcy, insolvency, or debtor laws, or makes an assignment for the benefit of creditors, or if a petition is filed against it in bankruptcy or under insolvency or debtor laws.

B. Notice of Default/Cure/Termination. In the event of default under paragraph 12.A. (Events of Default by PURCHASER) above, the STATE will serve written notice on PURCHASER that states the ground or grounds upon which default is alleged and demand a cure. In the event of a default by PURCHASER for failure to make payments of Stumpage Fees, or Performance Bond, or for failure to obtain or maintain insurance as required herein, Timber Operations must cease immediately upon PURCHASER's knowledge of the default or upon notice from the STATE, whichever is earlier. If the default is not cured within thirty (30) business days of written notice to PURCHASER, the STATE may suspend or terminate this Contract by serving written notice on the PURCHASER stating that this Contract is suspended or terminated. If an Event of Default is of any nature other than the defaults identified in the previous sentence and if (i) the default is not cured, or (ii) reasonable steps are not taken to diligently execute a cure within thirty (30) business days of notice, or within 48 hours in the case of obligations which the STATE or an authorized regulatory agency has declared to be of an emergency nature, the STATE may suspend or terminate this Contract by serving written notice

on PURCHASER stating that the Contract is suspended or terminated. Failure of the STATE to strictly enforce at any time any of the provisions of this Contract shall not be construed to be a waiver or affect the right of the STATE to thereafter strictly enforce such provision.

C. Remedies. In addition to the above, if an Event of a Default by PURCHASER occurs under this Contract through no fault of the STATE, the STATE, at its election, shall be entitled, after written notice to PURCHASER and the cure periods set forth above have expired: (i) to suspend the operations under this Contract until the breach is cured; (ii) to terminate this Contract and recover any and all damages including incidental and consequential damages; (iii) to terminate this Contract and retain the Bid Deposit, any Stumpage Payments, the Performance Deposit and all other fees and deposits paid by PURCHASER, plus all interest accrued thereon, as liquidated damages and not as a penalty; (iv) to seek specific performance of this Contract; and (v) to pursue any and all remedies in addition to or by way of alternative to the foregoing available at law or in equity.

13. INTERIM AND FINAL ACCOUNTING

Upon the expiration of this Contract or within ten (10) business days of the completion of all remaining obligations of PURCHASER, whichever is earlier, there must be a final accounting between the parties. The following amounts must be computed by both parties: any unpaid completion costs; amounts due to STATE under Paragraph 9J (Emergency Repairs) of this Contract; and any other amount due the STATE or PURCHASER pursuant to this Contract. Within thirty (30) days after all calculations have been made and approved by both parties, and final accounting inspections have been completed by STATE and applicable regulatory agencies, the party indebted to the other must pay the outstanding balance owed to the other party, at which time any remaining Performance Deposit shall be released or refunded.

Upon completion of all PURCHASER obligations under this Contract, the STATE will execute a written release, releasing PURCHASER from any further obligations under this Contract, except those that specifically survive termination of this Contract.

14. RIGHTS AND OBLIGATIONS UPON EXPIRATION OR TERMINATION OF CONTRACT

A. Rights in Timber Sale Area. Upon the termination or expiration of this Contract, any claim or right PURCHASER may have in and to the Timber Sale Area, to any Merchantable Timber or logs remaining in the Timber Sale Area or to the Roads and Related Facilities and the Timber Sale Areas shall terminate.

B. Obligation to Remove. Within thirty (30) days of completion or termination of PURCHASER's Timber Operations, whichever is earlier, PURCHASER must remove from the Timber Sale Area and the Roads and Related Transportation Facilities, all equipment, materials, chemicals, goods, supplies, machinery, cable, wastes, buildings, structures, and any other items or improvements placed thereon by PURCHASER. The Timber Sale Area and the Roads and Related Transportation Facilities must be left free of all litter, debris, and all foreign materials generated by PURCHASER's operations. PURCHASER's removal thereof must be made in a manner that does not leave the Timber Sale Area in a dangerous or unsafe condition and allows for reasonable concurrent uses during the removal period. If the above items are not so removed, they may either be removed from the Timber Sale Area at PURCHASER's expense or shall become property of the STATE if the STATE so elects.

15. NOTICES AND PARTIES' REPRESENTATIVES

All notices, requests, elections, consents or other communications that may be or are required to be given pursuant to this Contract to either of the Parties are effective only if given in writing and sent by certified mail, return receipt requested, by personal delivery to the other Party or by verbally confirmed facsimile copy, and shall be deemed received on the earlier of actual receipt or five (5) days after being deposited in the mail, postage prepaid, addressed to the STATE or PURCHASER at the following addresses:

To the STATE:

Area Forester

Attention:

Either party may change its representative or its field representative and its address for the purposes of this Paragraph 15 (Notices and Parties' Representatives) by giving notice of such change to the other party in the manner provided in this Paragraph 15 (Notices and Parties' Representatives).

16. ASSIGNMENT OF CONTRACT

This contract may not be assigned by the PURCHASER without written consent to such assignment first having been obtained from the STATE and the necessary amendment made to the contract.

17. LIENS.

PURCHASER must pay or cause to be paid promptly when due any claim, debt or charge against PURCHASER, which might become a lien against any of the STATE's assets associated with this Contract. PURCHASER must not suffer or permit any such lien or encumbrances of any kind to be filed against or upon any equipment, improvements, logs, the Timber or the property from which the same are cut, or from the proceeds thereof, regardless of whether the basis of such lien is a claim against PURCHASER or against an employee, agent, supplier, or subcontractor of PURCHASER. PURCHASER must keep the Timber Sale Area and Timber free and clear of any and all mechanics, loggers, labor or materialmen's liens arising from the performance of labor upon or the furnishing of materials to the Timber Sale Area. PURCHASER may contest the validity of any such lien that may be filed by providing reasonable security to the STATE. PURCHASER must post notices of the STATE's non-responsibility pursuant to AS 34.35.065 and AS 34.35.150.

18. REPRESENTATIONS AND WARRANTIES

A. STATE. As additional consideration for this sale, the STATE hereby represents, warrants, and disclaims warranties, as follows, which representations, warranties and disclaimers shall survive the expiration of this Contract:

- (1) It is duly authorized to enter into this Contract;

- (2) It makes no warranties, express or implied, as to the access, availability, operability, value, total volume that may be cut in the Timber Sale Area, type, species distribution, grade, quantity, quality, merchantability or fitness for a particular use concerning the Timber and the Timber Sale Area.
- (3) Its approval of the Operating Plan is not a warranty that the plan is economic, safe, or meets the requirements of Law;
- (4) It does not warrant the accuracy of any title, appraisals, timber cruises, investigations or other presale documents or evaluation the STATE has prepared;
- (5) It does not warrant any risk associated with previous mining activity on the land;
- (6) It does not warrant any other item that extends beyond the written contents of this Contract.

B. PURCHASER. As additional consideration for this purchase, PURCHASER hereby represents and warrants as follows, which representations and warranties shall survive the expiration of this Contract:

- (1) It has read the above STATE warranty section with care and in its entirety and understands it completely;
- (2) It has had an unrestricted opportunity to review documents received from the STATE related to this timber sale which are not subject to the attorney-client privilege and has carefully inspected the Timber Sale Area and all Timber on the Timber Sale Area, and except for the STATE's Representations and Warranties set forth in Paragraph 18A (STATE Representations and Warranties) above, PURCHASER is purchasing the Merchantable Timber and accepting the Timber Sale Area "AS IS;"
- (3) It has independently considered and made its own determination concerning the physical, legal and economic facts related to the access to and operations within the Timber Sale Area, barging and towing, log transport, log storage and transfer, raft delivery conditions, fuel transport and storage, availability of camps and sort yards, matters of title, government regulation, the construction of the required Roads and Related Transportation Facilities, the harvest of the Timber (and the ease or difficulty in harvesting it), the value, volume, grade, species distribution, type, quality and merchantability of the Timber and the economic feasibility and operability of the Timber and PURCHASER's ability to harvest the Timber, and all other matters related to the harvest and sale of the Timber. PURCHASER assumes each, every and all risks related to the Merchantable Timber and the Timber Sale Area;
- (4) It further assumes all risks related to the quantity or quality of rock, sand, gravel, stone or other construction materials in the Timber Sale Area;
- (5) It is in good standing in accordance with the Laws of the State of Alaska;
- (6) It is qualified to do business in the State of Alaska;
- (7) It is duly authorized to enter into this Contract and all agreements and documents contemplated hereby, and to make the representations and warranties set forth herein. When executed and delivered by PURCHASER, this Contract shall constitute a legal, valid and binding obligation of PURCHASER that the person executing this Contract for and on behalf of PURCHASER is duly authorized to do so, and that neither the execution of this Contract nor its performance by PURCHASER will conflict with or result in the breach of any other instrument, covenant or undertaking of PURCHASER;
- (8) All submissions to the STATE made in relation to this Contract are true and correct;
- (9) It is entering into this Contract based upon its own knowledge and information of the Timber, of the Timber Sale Area and of the timber business, and not because of any inducement or representation of the STATE, or any representative of the STATE;

(10) It is experienced in the logging industry, has independently reviewed all applicable Laws and has a sufficient working familiarity with such Laws to enable it to obtain necessary permits and comply with same; and

(11) It has consulted with an attorney of PURCHASER's own choosing concerning the contents of this Contract.

20. VALID EXISTING RIGHTS:

The rights granted to PURCHASER under this Contract are subject to all valid existing rights in existence on the Effective Date whether or not made of record, including without limitation, easements, rights-of-way, reservations or other interests in land.

21. PRODUCTION REQUIREMENTS

A. Logging Production. Commencing from the date of execution of this contract and within one year, the PURCHASER must have begun to harvest and remove timber from the sale area, and continue to harvest this timber sale so as to conceivably harvest and scarify the entire timber sale area in all units by contract expiration. All logging and hauling operations must be completed by **TERMINATIONDATE**, and all scarification must be completed by no later than six (6) months after harvesting or **XXXXXXDATE**, whichever comes first.

22. GENERAL PROVISIONS

A. Contractors. All Contractors and subcontractors engaged by PURCHASER to perform Timber Operations relating to this Contract, must be approved in advance by STATE; however, STATE shall not unreasonably withhold its approval. PURCHASER must require, by contract, all such contractors and subcontractors to abide by the terms and conditions of this Contract, and PURCHASER must provide them with relevant provisions of this Contract.

B. Delivery of Payments. All payments must be delivered to the STATE or to PURCHASER respectively at the addresses set forth in the Paragraph 15 (Notices and Parties' Representatives). PURCHASER shall not be entitled to any abatement, deductions or offsets of any amount due to STATE. All past due amounts owed the STATE shall accrue interest at the interest rate of 10.5% per annum until payment is received by the STATE.

EXHIBIT A TIMBER SALE AREA MAP

Willer Kash Reoffer

DRAFT

EXHIBIT B LEGAL DESCRIPTION

Willer Kash Reoffer

Property Description:

The Willer Kash Reoffer

SC-3204M, Timber Sale is located approximately 10 miles east of the community of Willow, Alaska (see Timber Sale Area Maps) in a portion of Section 29, T20N, R3W in the Seward Meridian (SM). This sale is laid out in six units that comprises approximately **170 acres**. This Timber Sale is designated for harvest and scarification for natural regeneration. The boundaries are shown on the attached Sale Area Map and unit maps, which is made a part hereof, and as designated on the ground by the State with timber sale boundary flagging (pink timber harvest boundary flagging). The Willer-Kash Road system will be used to access the timber sale. The Timber Sale Area includes only the area described above and as depicted on Exhibit A: *Willer Kash Reoffer, SC-3204M* Timber Sale Area.

EXHIBIT C Logging Requirements

Willer Kash Reoffer

General Description:

The sale area consists of six units totaling 170 acres. The sale units have more than 330 feet of no-cut area between it and the next closest unit as required by the Susitna Forestry Guidelines. The units are marked with pink "Timber Harvest Boundary" flagging.

Silvicultural Prescription

Within the harvest units, all dead spruce and merchantable birch 6 inches in diameter and larger at breast height are designated for removal. Snags, approximately 3 per acre for wildlife use, residual birch less than 6 inches diameter at breast height (DBH), and all live spruce less than 5 inches DBH will **not** be cut. Where feasible evenly scattered clumps of 3-5 leave trees will be preferred over single trees to reduce the chance of windthrow, provide better protection for the root system, provide additional habitat and cover for wildlife, and serve as a seed source for regeneration. Residual leave trees will be protected from damage during harvest operations.

Unmerchantable *Populus* sp. (aspen and cottonwood) and willow will be cut incidental to the timber harvest to encourage prolific regeneration from root and stump sprouts for moose browse and wildlife habitat. Logs may be left on site where they lay for use as habitat. Limbs and tops will be 1) severed and scattered to decompose in the units, 2) decked at a landing to be disposed of by burning by the purchaser, or 3) a combination of both treatments. If burning is utilized to dispose of slash, burn permits may be required and are the responsibility of the purchaser to consult with DEC and DOF and acquire necessary permits. If burning is utilized, piles may be burned when there is at least 6 inches of snow on the ground and must be completely extinguished before snow melts.

This timber sale will rely on scarification and leave trees for seed for reforestation. The leave trees described herein, and trees in the surrounding forest will be a source for seed for the future forest. All units will be **scarified as follows**: 50% exposed mineral soils distributed uniformly over each acre within the unit. Scarification can be incorporated into harvest operations, or within a year of completing harvest. A medium class excavator, Caterpillar D-6 class dozer or equivalent horsepower (180 horsepower or more) is required to perform scarification. Scarification is to be applied in all units on upland sites. Do not scarify in wet areas. Avoid areas with advanced regeneration, small willows and shrubs unless directed otherwise by DOF personnel.

All heavy equipment used in winter/snow movement, road building, timber harvest, scarification, skidding, forwarding etc.; including, dozers, road graders, excavators, backhoes, shovels, front end loaders, rubber tired skidders, cat-skidders, forwarders, delimeter/strokers, disc-trenchers, and mechanical harvesters; are **required to be pressure washed** at a location and in a manner approved by the State to remove all dirt and soil **prior to entering the Timber Sale Area**. The intent of this requirement is to remove soil and seeds of potentially invasive species that could impact reforestation efforts in the harvest units and along the road system.

The Purchaser's operations on the TIMBER SALE must at all times comply with the Best Management Practices as outlined in the Alaska Forest Practices Act and Regulations for public lands.

1. Landings must be located, constructed, and operated in a manner that
 - A. avoids surface and standing waters,
 - B. minimizes the use of marshes and non-forested muskegs;
 - C. prevents logs and vegetative debris from entering surface and standing waters; and,
 - D. minimizes the sedimentation of surface and standing waters.

2. An operator must locate and construct a landing according to the following standards:
 - A. when choosing the site of a landing, an operator must consider the effects of the landing location and provide for a logging layout that will reduce the overall adverse effects on the operation;
 - B. the design of a landing must minimize the need for side casting or fill;
 - C. a landing must be no larger than necessary for safe operation of the equipment and decking of logs;
 - D. where slopes have a grade greater than 67 percent, are unstable, or are in a slide-prone area, fill material used in construction of a landing must be free from loose stumps and excessive accumulations of slash, and must be mechanically compacted in layers if necessary to prevent soil erosion and mass wasting;
 - E. a truck road, a skid trail, or a fire trail must be outsloped or cross drained uphill of the landing and the water diverted onto the forest floor away from the toe of any landing fill;
 - F. a landing must be sloped, water barred, ditched or otherwise constructed and maintained to minimize accumulation of water on the landing; and
 - G. any excavated material from the construction of a landing may not be placed where it is likely to result in degradation of surface water quality.
3. To maintain bank integrity, an operator must minimize disturbance of residual trees, brush, and similar understory vegetation adjacent to surface and standing waters. An operator must also, where feasible, avoid disturbing roots, stumps, and deadfalls embedded in the bed or bank of surface waters, and standing waters larger than one-half acre.
4. In a riparian area, an operator must, where feasible and necessary, leave high stumps to prevent felled and bucked timber from entering surface waters.
5. The division will, in its discretion, require stabilization, to the extent feasible, of disturbed banks to prevent soil erosion and degradation of water quality.
6. If a tree is felled into nonfish-bearing surface or standing waters, the operator must remove the tree and its debris at the earliest feasible time, to the extent necessary to avoid degradation of water quality.
7. An operator may not buck or limb a tree or any portion of a tree lying between the banks of surface waters, except as necessary to remove the bole, limbs, or small debris from the water as required by 11 AAC 95.290(e) or this section.
8. If feasible, an operator
 - A. may not fell trees into a riparian timber retention area; and
 - B. must fell each tree in a direction that minimizes damage to trees retained in a partial cut.
9. During yarding, an operator must keep all logs fully suspended above or yarded away from surface waters where feasible, in light of the necessary equipment being reasonably available to the operator and the importance of the surface water to fish habitat and water quality, unless full suspension or split yarding would likely cause greater degradation of surface water quality or impact to fish habitat than cross-stream yarding.
10. The following standards apply to cable yarding operations:
 - A. when feasible, an operator must use maximum available deflection;
 - B. where feasible, an operator must use uphill yarding techniques;
 - C. where downhill yarding is used, an operator must use deflection to lift the leading end of the log and minimize downhill movement of slash and soils;

- D. when yarding parallel to surface waters, and when in or near a riparian area, an operator must make an effort to minimize soil disturbance and to prevent logs from rolling into surface waters or the riparian area; and
 - E. when yarding across marshes and non-forested muskegs, an operator must make an effort to minimize damage to vegetative cover.
11. The Purchaser may utilize only logging systems detailed in the Operating Plan. The number of skidding routes through an area must be minimized.
 12. An operator may not use a tracked skidder, a wheeled skidder, or a logging shovel during saturated soil conditions if degradation of surface and standing water quality is likely to result.
 13. An operator must minimize damage from skidding to the stems and root systems of retained timber. The PURCHASER must protect residual trees and seedlings during harvest operations. No more than 25% of the residual stand may be damaged. Residual trees or existing spruce regeneration that in the judgment of the STATE are unnecessarily damaged during felling and/or skidding operations must be paid for by the PURCHASER in accordance with the following: Liquidated damages for residual trees greater than 4 ½ feet tall is set at the rate of \$50 (fifty dollars) per tree. The PURCHASER must fell, skid or slash all damaged residual stems after the main harvest operations for that unit has been completed, as directed by the STATE. Damaged stems are defined as stems with broken tops, stems that are leaning more than 30 degrees off vertical, and stems that have more than one-third of the cambial surface (circumference) exposed from skidding scars
 14. When using tracked and wheeled vehicles, an operator must:
 - F. use puncheon where significant ground disturbances may contribute to sedimentation of surface water;
 - G. locate skid trails to minimize degradation of surface water quality;
 - H. use water bars or other appropriate techniques as necessary to prevent or minimize sedimentation;
 - I. keep skid trails to the minimum feasible width; and
 - J. outslope skid trails where feasible, unless an inslope is necessary to prevent logs from sliding or rolling downhill off the skid trail.
 15. Upon the completion of operations at a site, a skid trail must be water-barred according to the standards set out in 11 AAC 95.315 or otherwise stabilized to prevent erosion from entering surface waters.
 16. An operator may not use a tracked or wheeled skidder on a slope where this method of operations is likely to cause degradation of surface and standing water quality.
 17. The tops of all trees felled, and not yarded to the landing, must be lopped and scattered in such a manner as to lay away from residual trees. Non-merchantable trees cut for skid roads, landings, etc., are to be treated as slash unless otherwise directed by the STATE. "Lopping" means that the top is cut into segments not greater than 3 feet in length, and treated as slash. Slash must be treated so that the slash height does not exceed two feet above the ground. All heavy accumulations of slash occurring at the landing must be piled. Slash must be wind-rowed or piled adjacent to the landing for burning by the PURCHASER as an on-going process during harvest. The PURCHASER must obtain the necessary open burning permits for slash burning prior to igniting the slash. The PURCHASER must notify the Division of Forestry in Palmer (907-761-6316) prior to igniting any fires intended for slash disposal.

18. Any spruce trees or portions of spruce trees larger than 5 inches in diameter which were alive prior to felling and yarding and are found not to meet minimum product specifications (cull) must be skidded to the landing(s), removed from the sale area or piled and burned as directed by the STATE. Accumulations of slash or logging debris in or around landing(s) must also be piled and burned or otherwise disposed of as directed by the STATE within one year.
19. Existing recreational trails affected by harvest operations must be cleared of slash and logging debris by the operator in such a manner as to leave the trail safe for normal recreational use. Harvest operations must leave the ground surface in a condition that freely drains and in a surface condition like or better than prior to harvest operations. Trails impacted by the PURCHASER must be cleared daily of logging debris and signed as detailed in Exhibit E by the PURCHASER to maintain safe conditions in the Sale Area or as required by the State.

DRAFT

EXHIBIT D OPERATING PLAN REQUIREMENTS

The Operating Plan must comply with the requirements of the Alaska Forest Resources and Practices Act (FRPA) under AS 41.17, , the Alaska Land Act under AS 38.05, and 11 AAC 71.300. The Operating Plan must provide the STATE with sufficient information to allow the STATE to understand the Timber Operations, as they will occur in the field. The Operating Plan must include identification of any areas of concern identified by the PURCHASER, including any potential conflicts with FRPA. The information required in the “Operating Plan” must also provide the STATE with the following information:

A. Overall Description of Operating Plan.

- (1) Timber Harvest schedules, to include specifications of the number of the settings and associated access development by year. Start and stop dates for operations such as cutting, road building, hauling, logging, scaling and any periods without operations longer than 60 days;
- (2) Fire planning, including an area-wide action plan and list of adequate equipment maintained in the Timber Sale Area to suppress fires;
- (3) An area-wide control plan for Hazardous Substances;

B. Details of Operating Plan.

- (1) Method and schedule of timber harvest by settings for the plan year, and the estimated volume by month to be harvested during the plan year. This must be identified on the unit maps and in writing;
- (2) Details of road construction and maintenance, including a summary of areas of concern due to slope or other considerations along with specific pit and waste areas plans, and a traffic management plan that considers hours of operation, hunting seasons, recreational use, firewood cutters, mushing activity, trail use etc.
- (3) Details of the seasonal closeout plan, including Roads and Related Transportation Facilities and other pertinent information. Also, the annual plan under this Contract must provide for closeout activities, including putting roads to bed and full clean-up;
- (4) Locations of log scaling areas, log transfer facilities, camp facilities or local operations office; and copies of any required road or land use contracts.
- (5) Names, addresses, business licenses, proof of insurance and contact persons for all contractors. The plan must state the task and percentage of the work that each contractor will perform for the Purchaser.
- (6) An equipment washing/sanitation plan designed to minimize the potential of invasive plant species movement into the sale area (listing the wash station or car wash location is required). **An inspection of equipment** coming into or back into the Timber Sale Area is **required prior to entering the Timber Sale Area**. Make arrangements with the STATE by prior appointment to do the inspection.

EXHIBIT E ROAD CONSTRUCTION AND MAINTENANCE REQUIREMENTS

Willer Kash Reoffer

1. Road and Landing Construction. Roads as identified in Exhibit F must be used for access to the timber sale. All road segments must be built to the specifications described below, and in the location marked on the ground with orange centerline ribbon labeled "Truck Road" (also shown on timber sale layout map). The road type(s) required in the sale is identified in Exhibit F. The type, grade and alignment may be changed only with written permission from the STATE representative. The PURCHASER must take all measures which the STATE determines necessary to protect stream banks and stream courses during road and landing construction and to prevent erosion of exposed soil and fill material.
2. Drainage Structures. Obvious drainages are identified in Exhibit F. The drainage structures identified are for surface waters of significant size that will likely require that special care be exercised during road construction and logging operations. The drainages may not be capable of supporting snow and ice bridge crossings, depending on the seasonal weather conditions. If weather conditions provide for good logging conditions but are inadequate to harden areas adjacent to drainages for truck and equipment traffic, the PURCHASER must be prepared to:
 - a. Stop hauling, scarifying and/or logging operations until conditions improve with respect to the integrity of the streams and soil conditions. The State will make the final determination as to whether conditions are adequate to maintain water quality and stream integrity. This in no way diminishes the responsibility of the Purchaser to maintain water quality under the FRPA.
 - b. Install portable bridge structures over unstable stream areas to protect the integrity and water quality of the streams by keeping traffic away from the streams and associated unstable soil conditions.
3. Culvert Specifications: Culverts must be installed as approved by the STATE with the following specifications:
 - a. Culverts must extend beyond the base of the road at least 36" on either side of the road,
 - b. The minimum culvert diameter is 18 inches,
 - c. The natural slope of the stream or drainage must be maintained, where feasible,
 - d. Culverts must be designed and installed so as to maintain the course of the stream or drainage. On steep slopes, the culvert drain must be sloped about 30 degrees down grade,
 - e. Culverts must be installed to avoid pooling at either end of the culvert, use ditch plugs on steep slopes,
 - f. PURCHASER must install energy dissipaters and sediment traps to prevent erosion on steep slopes and sediment run off,
 - g. The road bed depth over the culvert must be ½ the culvert diameter or at least 12 inches, whichever is greater,
 - h. Bedding material must be free of rock and debris that might puncture the pipe or carry water around the culvert,
 - i. The bedding material must be tamped along the sides and above the pipe, and
 - j. Culverts in streams requiring fish passage must be installed as per 11 AAC 95.305.
4. Bridge Construction
 - a. Each end of the bridge must be firmly anchored to the abutment structure;
 - b. An earth embankment constructed for use as a bridge approach must be protected from erosion by using planted or seeded ground cover, bulkheads, rock riprap, retaining walls, or other equally effective means;

- c. A bridge must be installed in such a way as to minimize disturbance to the bed and banks of a stream. No part of the finished bridge structure may be below the high water marks of the stream or obstructing the stream's flow between ordinary high water;
- d. Equipment stream crossings are not authorized without prior specific State approval. The purchaser must submit written plans if crossing of open (unfrozen waters) is required for road construction.
- e. A snow ramp or ice bridge must be constructed only of snow, ice, and cribbing, and must be largely free of soil and organics; it must be constructed to disintegrate with natural ice breakup, or it must be breached and the cribbing removed when feasible before breakup to protect downstream structures, water quality, and fish habitat.
- f. Bridge structures used on the sale must meet or exceed USFS standards for temporary low volume industrial bridge structures for the loading anticipated by the purchaser.

5. Road Maintenance.

- a. On-going Maintenance. Once initial operations involving road use under this contract commence by the PURCHASER, maintenance must be an on-going function throughout the duration of the contract. The PURCHASER may cease maintenance operations during prolonged shut-down periods providing all roads are stabilized according to the standards specified in (D&E) below with prior written approval by the STATE.
- b. Existing Road Cross Sections. The PURCHASER must maintain existing road cross-sections by blading and shaping the surface and shoulders or replacing surfacing as required by the STATE.
- c. Minimize Damage. The PURCHASER must minimize damage to ditches, drainage structures, slopes and road surfaces. Where damage does occur, the PURCHASER must restore the road and structures to their prior condition within 48 hours, unless the STATE requires a shorter or longer period of time.
- d. Preventative Maintenance. The PURCHASER must perform preventative maintenance at the end of each operating season to minimize weather damage during the non-hauling period. This may include cross-ditching, post-haul blading to remove berms, ruts or other surface irregularities that would interfere with normal runoff of water and cleaning ditches and removal of drainage structures.
- e. Seasonal Work. The PURCHASER must perform all seasonal weather clean-up, removal of bank slough, minor slides and fallen timber, brush road, replace material eroded from slopes, and clean out drainage ditches and culverts at the beginning of each operating season. In removing material from slides or other sources, the PURCHASER must deposit the material in a location where it will not erode into streams, lakes or reservoirs. Cut slopes, slumps, or other areas of exposed soil that are at risk for producing sedimentation of surface waters must be grass seeded or otherwise stabilized to reduce sediment transport.
- f. Work Upon Termination. All roads and structures must be put to bed upon termination of use in compliance with the Alaska Forest Resources and Practices Act and Regulations, or at the option of the STATE, they may be left to be maintained as specified in (E) and (F) above.

6. Road Maintenance Contracts.

- a. If the PURCHASER jointly uses the Roads and Related Transportation Facilities with other authorized parties under this, or a subsequent contract, each party must enter into a joint use road maintenance Contract prior to hauling logs on the jointly used roads.
- b. The PURCHASER, if utilizing state, borough maintained roads and private roads for business operations, must protect the roads from damage by its activities. Any damage to public and private roads must be corrected to existing or better condition. The PURCHASER, if using public and private roads for business operations, must also contact the Matanuska-Susitna Borough Road Service Area (RSA) to inform them of the time and duration prior to the start of operations. The PURCHASER and the private property owner are responsible for negotiating private road issues. The STATE, in its discretion, reserves the right to enforce any such agreements as third-party beneficiary contracts.

7. Road Standards.

Primary or Main Haul Roads

Road Width:	Roads must be 25 feet, including ditch (see typical roadbed section) and 40 feet where designated turnouts are built.
Surfacing Width:	14-16 feet running surface.
Use:	Moderate year round, except during spring breakup. Designed and constructed to access several timber sales, or to allow for possible future upgrades.
Surfacing:	The minimum necessary, usually a minimum of 12" of gravel, to allow log trucking without surface deformation year round, except during spring breakup.
Turnouts:	Surfaced length of 50 feet , 12 foot width and 25 foot length of ingress and 25 foot egress. Turnouts must be inter-visible, or every ½ mile, whichever is more often.
Grade:	The maximum favorable grade is 10%; the maximum adverse grade is 6%.
Degree of curvature:	The ordinary desired curve radius is a 100 foot minimum.
Stump removal:	Stump removal is required under running surfaces and ditches.
Clearings:	All merchantable materials within the road clearing limits must be felled, limbed and decked at landings. Debris must be pushed into natural openings and may also be buried beneath the running surface of the road, especially in wet areas that need more support.
Ditches:	Minimum depth is 1½ foot below the surface grade of the entire length of both sides of the road and must be adequate to drain peak flow.
Culverts:	Culverts must be placed on the natural slopes where necessary to prevent pooling of water caused by the roadbed. Culverts must extend beyond the base of the road at least 36" on both sides of the road.

Secondary Roads

Road Width:	Roads must be 20 feet, including ditch (see typical roadbed section)
Surfacing Width:	14 feet running surface.
Use:	Light year round, except during spring breakup. Designed and constructed to access more than one timber sales, or to allow for possible future upgrades.
Surfacing:	The minimum necessary, usually a minimum of 6" of gravel, to allow log trucking without surface deformation year round, except during spring breakup.
Turnouts:	Must be constructed large enough for opposing truck and utility vehicles to safely get out of log truck traffic without undo maneuvering at the typical traffic speed. Turnouts must be every 1/4 mile, or more often as needed for safe passage of logging trucks and at the end of the spur.

- Grade: The preferred maximum favorable grade is 10%; the preferred maximum adverse grade is 8%. In any case, the grade must not exceed standards set by OSHA.
- Degree of curvature: The ordinary desired curve radius is 75 foot minimum.
- Stump removal: Stump removal is not required under running surfaces and ditches, but they must be sheared off or otherwise lowered so as to not affect the road surface or ditch function.
- Clearings: All merchantable materials within the road clearing limits must be felled, limbed and decked at landings. Debris must be pushed into natural openings and may also be buried beneath the running surface of the road, especially in wet areas that need more support.
- Ditches: Minimum depth is 1 foot below the surface grade of the entire length of both sides of the road. Ditches must be adequate to drain peak flow. The road must be graded and crowned to drain. Standing water may not be allowed to pool on the road.
- Culverts: Culverts must be placed on the natural slopes where necessary to prevent pooling of water caused by the roadbed. Culverts must extend beyond the base of the road at least 36" on both sides of the road.

Spur Truck Roads

- Road Width: Roads must be 16-18 feet.
- Surfacing Width: 12-14 feet running surface.
- Use: Light short-term. Chiefly timber harvest use, normally less than ¼ mile in length. No expected future extension.
- Surfacing: The minimum necessary to complete timber harvest operations, normally a seasonal road.
- Turnouts: Must be constructed large enough for opposing truck and utility vehicles to safely get out of log truck traffic without undo maneuvering at the typical traffic speed. Turnouts must be constructed as needed for safe passage of logging trucks and at the end of the spur.
- Grade: The preferred maximum favorable grade is 20%; the preferred maximum adverse grade is 12%. In any case, the grade must not exceed standards set by OSHA.
- Degree of curvature: The ordinary designed curve radius is 75 foot minimum.
- Clearings: Debris may be buried or piled in natural openings.
- Ditches: As required to minimize water quality impacts. The road must be graded and crowned to drain. Standing water may not be allowed to pool on the road.
- Culverts: Culverts must be placed on the natural slopes where necessary to prevent pooling of water caused by the roadbed. Culverts must extend beyond the base of the road at least 36" on both sides of the road.

Winter Ice Roads

Winter roads are roads that can normally support regular logging vehicle traffic only during winter months and that have a load bearing capacity derived from a combination of frost, snow, and/or ice (11 AAC 95.900(90)). Construction techniques for winter access routes depend on the range of terrain encountered, and may include clearing vegetation and ground cover needed to provide a level running surface. Road surfaces may be composed of frozen mineral soil, packed snow, ice, or surface organics (11 AAC 95.290(f) & (g)). Some segments of winter roads may cross terrain that requires construction to all season standards. Ballast for winter construction will predominately be snow, ice and frozen organics.

Where ballast is required, it must be obtained from an approved borrow pit. Unless otherwise approved in writing and staked on the ground by the STATE, road fill placed by the PURCHASER must not cover, encroach on, or alter permanent or intermittent water channels.

Road Width:	Roads shall be 14 feet.
Surfacing Width:	12 feet running surface.
Use:	Light short-term. Chiefly timber harvest use. No expected future extension.
Surfacing:	The minimum necessary to complete timber harvest operations, normally a seasonal road. Minimum requirement of 8 inches of snow and 6 inches of frost to maintain a minimum of three inches of compacted ice and snow. This standard allows for variations in winter snow conditions. Deep snow may prevent ground freezing but provide for adequate ground protection. If the ground is not frozen to a depth of at least 6 inches, additional snow depth is required.
Turnouts:	Must be constructed large enough for opposing truck and utility vehicles to safely get out of log truck traffic without undo maneuvering at the typical traffic speed. Turnouts are to be constructed as needed for safe passage of logging trucks and at the end of the spur.
Grade:	The preferred maximum favorable grade is 10%; the preferred maximum adverse grade is 10%. In any case, the grade must not exceed standards set by OSHA.
Degree of curvature:	The ordinary designed curve radius is 75 foot minimum.
Stump removal:	Blading or removal of stumps and vegetative mat is prohibited unless approved by the STATE. All stumps must be cut lower than 6 inches.
Clearings:	Debris may be piled in natural openings and burned.
Ditches:	Not required.
Maintenance:	Open drainages before spring breakup. Close access after logging use. Discontinue use before frost layer is too thin to prevent surface deformation.

8. Road Closure.

- a. Road closure must meet the standards identified by 11 AAC 95.320 of the Alaska Forest Resources and Practices Regulations.
- b. The first 300 feet of any temporary road constructed as part of this Agreement must be ripped with a dozer, overburden and debris pushed back over the road bed, and/or other actions necessary to make the road impassible as directed by the STATE.

- c. Temporary roads designated by the State to remain open for recreational use will require berms, cables, or gates to restrict highway vehicle use.
9. Clearing and Grubbing
 - a. Trees within the road right of way must be felled and yarded ahead of the road construction.
 - b. The clearing boundary limits outside of the sale area are 75' on either side of the centerline. Timber from within the ROW is considered part of the Timber sale and will be handled as such by the PURCHASER. Within the sale area, the PURCHASER may determine the clearing limits.
 - c. Snags and trees leaning heavily over the roadway that are outside the clearing limits must be felled.
 - d. Unstable soils must be stabilized to minimize sedimentation by using appropriate erosion control measures such as seeding, using erosion control mats, and installing settling basins.
 - e. Cuts and Fills. Minimize cuts and fills in thaw-unstable permafrost. Cuts and fills must be avoided.
 - f. Removal of Surface Organics. Surface organics may only be removed to provide a level running surface.
 - g. Debris must not be piled or pushed against existing trees.
10. Trail Signage. The PURCHASER must place warning signs on all snowmobile routes and seismograph trails where they intersect with the Timber Sale Area. Warning signs must also be placed wherever snowmobile trails intersect with roads used for log removal. The signs must be placed in clear and conspicuous locations. The signs must be maintained throughout the life of this agreement.
11. Road Signage. Reflective "Caution Trucks Entering Roadway" signs (one each side of the junction) must be erected at the junction of all roads. Applicable warning signs must also be placed wherever recreational trails intersect with roads or skid trails used for logging operations. The signs must be placed in clear and conspicuous locations that will allow for adequate and safe notification (day and night) at the typical speeds used by the vehicles traveling on the trail or road. The signs must be maintained throughout the life of this agreement by the Purchaser.

12. Grading

- Any fills over 6 feet must be widened 2 feet for each 6 feet of centerline depth to a max. of 36 feet. Fill slopes must be no steeper than 1 1/2:1 for common fill.
- Cut slopes must be no steeper than 1:1 common, 1/2:1 soft rock, 1/4:1 solid rock.
- Some dry season roads may require extra widening on curves and deep embankments

Extra Widening	Inside of Curves
Fills under 6' add 1'	10' - 1 foot
Fills over 6' add 2'	30' - 2 feet
	50' - 3 feet
	60' - 4 feet

TYPICAL ROADBED SECTION
SINGLE LANE - WITH TURNOUTS

13. Drainage Structures

No drainage structures are anticipated for this sale.

EXHIBIT G INSURANCE POLICIES

Willer Kash Reoffer

Without limiting PURCHASER 's indemnification, it is agreed that PURCHASER shall purchase at its own expense and maintain in force at all times during the performance of services under this agreement the following policies of insurance. Where specific limits are shown, it is understood that they shall be the minimum acceptable limits. If the PURCHASER 's policy contains higher limits, the state shall be entitled to coverage to the extent of such higher limits. Certificates of Insurance must be furnished to the Area Forester prior to beginning work and must provide for a 30-day prior notice of cancellation, nonrenewal or material change of conditions. Failure to furnish satisfactory evidence of insurance or lapse of the policy is a material breach of this contract and shall be grounds for default. All insurance policies shall comply with, and be issued by insurers licensed to transact the business of insurance under AS 21.

- a. Workers' Compensation Insurance: The Contractor must provide and maintain, for all employees engaged in work under this contract, coverage as required by AS 23.30.045, The purchaser must also be responsible for Workers' Compensation Insurance for any subcontractor who performs work under the timber sale contract. The coverage must include:
 - i. Waiver of subrogation against the state by the purchaser and all subcontractors associated with the timber sale;
 - ii. Employer's Liability Protection at \$500,000 each accident/each employee and \$500,000 policy limit;
 - iii. "Other States" endorsement if the purchaser or subcontractor directly utilizes labor of residents from outside of the State of Alaska;
 - iv. United States Longshore and Harbor Workers' Act Endorsement, whenever the work involves activity over or about navigable water; and
 - v. Maritime Employer's Liability (Jones Act) Endorsement with a minimum limit of \$1,000,000 whenever the work involves activity from or on a vessel on navigable water.
- b. Commercial General Liability Insurance: covering all business premises and operations used by the Contractor in the performance of services under this agreement with minimum coverage limits of \$300,000.00, combined single limit per occurrence.
- c. Commercial Automobile Liability covering all vehicles used in connection with the timber sale. All operators must meet the State minimum requirements for commercial carriers as defined in AS 19.10.300.
 - \$200,000 property damage single occurrence.
 - \$500,000 bodily injury single occurrence.
 - \$2,000,000 combined damage in single occurrence.

EXHIBIT H APPROVED OPERATING PLAN

To be submitted by PURCHASER, approved by STATE and attached hereto.
